

### **AMENDMENTS**

In the specification please amend the abstract as follows:

A seal [[10 ]]for a toilet outlet is described. The seal [[10 ]]comprises a body [[12 ]]and a deformable undercut lip[[ 16]]. The lip [[16 ]]is arranged so as to roll radially from the body [[12 ]]when subject to load, such as that exerted by a toilet outlet. The rolling motion of the lip ensures that the seal [[10 ]]deforms evenly and predictably when subject to load, so reducing the need for precise alignment of the toilet with the seal when installing the toilet.
